

## Care & Cleaning instructions for Support Cushions

- 1) Store them flat - rolling or compressing the cushions results in a wrinkled skin.
- 2) Avoid stacking the cushions against a protruding object; this could leave permanent marks or depressions in the cushion.
- 3) If you will be storing the cushions so that they are in contact with each other, we recommend dusting them lightly with baby powder to prevent them from sticking together.
- 4) Avoid contact with any type of printed materials; this may transfer onto the cushions.

CLEANING: Soap & water is usually all that is necessary. For tougher cleaning jobs, Soft Scrub® (with or without bleach) or any mild abrasive cleaner applied with a brush works well, rinse thoroughly.

**We encourage you to use these cushions individually or together as needed to provide support during any activity which requires holding a static position. Some examples are shown below.**
